

FIRE PREVENTION

- All shelters, warehouses and buildings must be kept clean.
- The ground and the runways must be cleaned off any oil, grease and waste materials.
- The pedestrian crossings must be kept free from any obstacle.
- Inflammable cloths must be put in metal containers. Paper and inflammable waste materials must be put in the adequate dustbins.
- When using cleaning products in the workshops and other work sites, the person in charge must ensure that these products are properly stored and that the work environment is fitted with an emergency safety system.
- The storage of fluids in glass pots, open tanks or paper containers is not allowed. The quantity of stored fluids in a workshop or work site must be kept at a minimum level in compliance with the production requirements and the work good practices.

Painting, coating and varnishing materials are highly inflammable and must be kept in metal containers, closed and away of any source of flame or excessive heat.
